Subject: The right to know

Sensitivity: Personal

As a consumer , mother , and citizen of the United States I feel the need to let you know that I want the right to know what is put into my foods and if they are genetically engineered. If there are health hazards to consuming certain ingredients, preservatives or growing processes, it is the manufacturers responsibility to let me know by labeling such on the package.

Why would anyone think it the right thing to do to hide a potential cancer causing toxin, or other unhealthful ingredient into my food.

America is land of the free. We need the freedom of choice , it is part of the constitution, and my right as an American. How dare anyone try to take that away from me.

Sincerely,

Gwynne McLaughlin
